

TESTIMONIAL

St. Louis College of Pharmacy Implements CORE ELMS

The team at St. Louis College of Pharmacy switched to the CORE ELMS application to streamline management of their experiential learning component.

“**CORE has been very responsive to our needs throughout the implementation process.**”

“Starting with any new system can be an overwhelming process. But before switching **we had heard about CORE** and how their client support really easily walks you through the process – and that has been so true. CORE has been very responsive to any of our needs throughout the implementation process. They guided us through various trainings and weekly phone calls to really get at our specific questions and how we can customize the system for our institution’s needs. I feel like **every day I discover something new from CORE** and how that can help our students, preceptors, and experiential department. It’s exciting learning all of these new things we didn’t know were possible.”

*Alison Stevens, Pharm.D, BCPS
Assistant Director, Office of Experiential Education,
Associate Professor, Pharmacy Practice
St. Louis College of Pharmacy*

“We have 250 students per class and about 1100 preceptors. For that reason, we need to make sure our communication is very easy and clear. Making sure students get the ideal rotation setup that they want can also be challenging. **There are many different ways that CORE has helped us for the better.** We kept hearing so many great things about the customer service with CORE, and that has turned out to be true. They also have a great reporting system and the ability to communicate easily with various preceptor types. **We have had a smooth transition** and we’ve been learning a lot of new things we can implement to make our program work even smoother.”
